TIME&SPACE

FRONT SPACE – VISITOR MANAGEMENT MODULE

For any organisation with even moderate visitor traffic, a card based visitor access is essential. Once in place, it needs to be fast and efficient, as convenient as possible, and no compromise for security. Meet Front Space, a specialised Time&Space software module for visitor management, which is used on hundreds of reception desks, assuring smooth flow of thousands of visits, day after day.

Challenges in visitor records

Once visits become more than just occasional, the low-tech approach with escorting visitors quickly becomes inadequate. The more visitors we have, the bigger is security concern, and more critical is visitor management. Also, the sheer number of visitors can become logistic and organisational challenge. All that calls for a dedicated visitor management system with specialised reception desk and access control features.

They say first impressions are most important. For many of your clients, partners and customers, visitor management system is the first experience with your company!

Front Space Benefits:

Much faster repeated visits

Once the visitor is in the database, reception desk enrolment becomes much faster. This is especially important for frequent visitors such as business partners, clients, or regular maintenance crews. In addition to saving everybody time and effort, the lobby gets less crowded.

Less need for escort

Since each visitor gets exact access rights for reaching the host location, there is much less need for host escort. The visitor will not be able to access other areas and will be not able to access anything after the visit time expires. Everybody saves time, no running up and down for visitors, no waiting visitors at the lobby.

Access tracking

With Front Space, visitor tracking is integrated with access control system, so all access tracking features from Time&Space are available. Visitors can be tracked live using popups and map based views. Access logs can be searched and browsed for incident investigations.

Integrated video surveillance

Front Space users enjoy all benefits of Time&Space video surveillance integrations. Both live tracking and log searches can be coupled with video for even higher and more efficient security.

For the needs of analysis or archiving, different types of prints are available with the Report Wizard which can be exported in .pdf, .xls and .txt formats.

> Inadequate visitor management is well known as classic security loophole in physical access control. When visitors are not included in the access control system, they quickly become its weakest link.

Front Space Features:

- Seamlessly integrated with Time&Space system.
- Desktop software client with optimised workflow.
- Web client for distributed visitor management on multiple locations.
- Advance booking by host or secretary, or ad-hoc registration.
- Badges with optimised access profile for each particular visit.
- Pre-set badges for predefined visitor zones.
- Visit expiration notification.
- Visitor photo import.
- Support for card issuing printers.
- Reports for visits, visitors and hosts.
- Visitors'documents scanning for direct import to the system.

spica

Front Space is licensed according to number of concurrent visits. Number of visitors is not limited by license.
